PROFILE

Student of Engineering and Computer Science with a passion for multidisciplinary projects. Active participant in academic research, with experience in software development, data analytics, grey-hat hacking and hardware prototyping. Skilled at bridging technical and creative fields to drive innovative solutions.

EDUCATION

Singapore University of Technology and Design (SUTD)

- *Bachelor of Engineering in Computer Science and Design*

Security Track, Minor in Analytics and AI

2023 - Ongoing

Expected Graduation: 2027

Current GPA: 4.9

SUTD Honours and Research Programme (SHARP)

NUS High School of Math & Science

- *Diploma (High Distinction), Class of 2020*

Honours in Math, Chemistry, Biology, Major in Physics

2015 - 2020

Graduation CAP: 4.7

PROJECTS

Products

DripSeek (NEXT SuperAI Hackathon Winner)

- *Full Stack Developer*

2025

JavaScript, React, Python, AWS (Bedrock), AI Modelling (Amazon Rekognition, LLaMa, PixelCut)

A browser plugin that identifies clothes worn by actors in real time on streaming platforms letting users instantly shop similar styles (agentic computer vision solution).

Wandr (Singtel Award: 1st Prize)

- *Back-end Developer*

2025

Java, MySQL, Spring Boot Android

A modular approach to an itinerary planner application with built in exploration carousel and shop features. Designed MySQL database for storing multimedia content and key user information. Integrated API into Java Frontend using Spring Boot

UniSync (Best Project in Class)

- *Technical Engineer*

2024

C++, ESP32, Fusion 360, Python

Scalable solution for sporting events to encourage audience engagement using wearable technology with movement identification and wireless communication

Undergraduate Research

Opportunities Programme (UROP)

Timing Attacks using Genetic Algorithm

- *Developer and Researcher*

2025

Python

Exploiting naive and complex algorithms like password and hash checkers. Research focused on developing a mathematical formula to accurately estimate probabilities of cracking using importance splitting.

InQuery – LLM assisted Note-taking

- *Developer and Researcher*

2024

JavaScript, Python

Research focused on improving student engagement and interaction with LLM. Bloom's taxonomy used to adapt to student's learning style with ChatGPT prompt engineering

OASIS - Real-time Room Occupancy App

- *Developer and Researcher*

2023 - 2024

Java, Python, C++, ESP32, Android, Firebase

Created a system to monitor real-time room occupancy to improve user booking experience. Research focused on YOLO Computer Vision and IoT integration to detect human presence

Notable Achievements

National AI Student Challenge (1st Prize)

- *DataRobot Track (NatSteel)*

2025

Python, DataRobot

Forecasting steel consumption for client needs using DataRobot Platform and building regression/clustering models in python

WORK EXPERIENCE

SUTD Teaching Assistant

- *TA in Programming, Physics*

and Fabrication courses

2024 - 2025

Python

Assisted in conducting tutorials and mentored students in Data Structures and Algorithms

Raven Parthenon Education

- *Biology and Math Olympiad Tutor*

2022-2023

Mentored students in Math and Science subjects to take part in national and international Olympiads.
